

# UR cobots for precision palletizing

With their small footprint, unrestricted workspace and high repeatability, UR cobots are ideal for precision palletizing in many industries, including food & beverages, metalworking, machining, plastics, moulding & others.

## Modify and create programs for instant use

The dedicated palletizing wizard in our Polyscope interface software enables you to program your application in minutes. Teach the cobot a few locations by dragging it into position, and the wizard will create a palletizing structure for you. If parts are moved to your cobot by conveyor, connect an absolute or incremental encoder to our high-frequency inputs to track the parts and pick them up on the fly.

Creating new programs normally takes just 30 minutes, but if your cobot is too busy, you can use our free URSim offline simulator to modify an existing program or create a new one for instant loading and use. You can save as many application programs as you need, easily transferring them to and from your cobot via a thumb drive or our built-in FTP server.

## Eliminate the need for extra hardware

An integrated digital I/O interface in the control box often eliminates the need for extra hardware to control other parts of the machine the robot interfaces with, reducing the cost of your application as a whole. Your gripper connects directly to the I/Os on our tool connector (2 DI, 2 DO, 2 AI), eliminating the need for an external cable along the robot arm. In more complex machines, you can use the integrated field bus ethernet-based protocols to manage communications.

## BUSINESS BENEFITS

- Combat rising packaging costs
- Make sure your deliveries are always correctly counted and packed
- Streamline your packaging and palletizing operations
- Relieve workers from strenuous repetitive tasks
- Free up employees to do higher-value work

## ADVANTAGES

- Very small footprint (128, 149 or 190 mm diameter)
- Unrestricted workspace (360° at every joint)
- High repeatability (0.1 mm/0.004")
- Fast programming, unlimited saved programs
- Extensive, flexible connectivity/communications

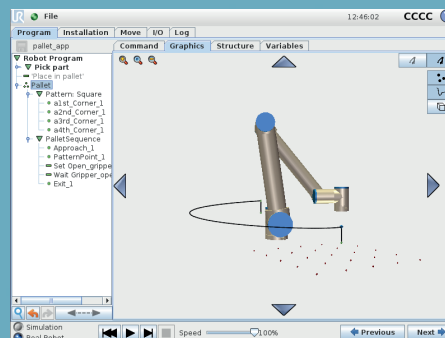

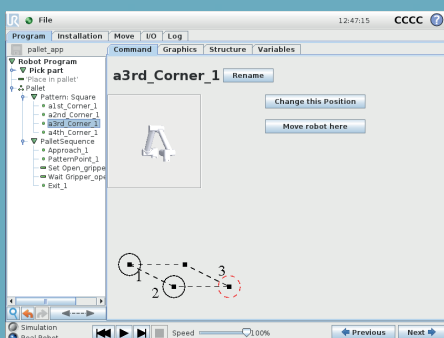

## CONTACT

Want to hear more about how cobot-assisted palletizing can help your business?

# Cobot palletizing in *your* industry

Cobots from Universal Robots are used for palletizing in many industries, with those listed below especially common. If you don't see your industry below, contact us to find out how a UR cobot can help your business.

## FOOD AND BEVERAGE

- Cobot's outer casing designed specifically to reduce the risk of dust/debris accumulation
- Save your workforce from repetitive and/or dangerous work in hot, cold or otherwise unpleasant environments
- Cobot arms improve consistency while reducing waste
- Non-stop productivity in the food production chain
- Average payback time: 3-12 months

CASE: **Atria**  
Country: **Sweden**  
Cobot: **UR5**

Result: Optimized material usage in the packaging department, reducing carton waste by 25 percent and slashing change-over time from six hours to just 20 minutes.

Scan the code and see the video:

[www.universal-robots.com/case-stories/atria/](http://www.universal-robots.com/case-stories/atria/)

## METALWORK, MACHINING

- Boost productivity and improve tool and part precision
- Easily adjust production lines despite variable processes, materials, and specialized products
- Benefit from up to +/- 0.1 mm (0.004") repeatability – every time
- Reduce injury risk while increasing precision with complex tasks involving close proximity to dangerous machinery

CASE: **Multi-Wing CZ**  
Country: **Czech Republic**  
Cobot: **UR5**

Result: Reduced unit production costs 10-20% and increased capacity by 336 hours per year, thanks to 70% faster feed and 10 seconds time savings on machine part replacement.

Scan the code and see the video:

[www.universal-robots.com/case-stories/multi-wing/](http://www.universal-robots.com/case-stories/multi-wing/)

## MOLDING

- Cover all areas of plastic/polymer production, including de-gating, PCB loading/unloading, and pick & place projects
- Reduce employee exposure to noxious production gases
- Enhance safety by protecting line workers from plastic shavings and handling with sharp objects
- Spare employees from repetitive work while increasing your production capacity
- Lightweight, space-saving and easy to re-deploy to multiple applications without altering production layouts

CASE: **Dynamic Group**  
Country: **United States**  
Cobot: **UR5**

Result: Quadrupled production capacity and reduced scrap volumes from significantly high to near zero.
